

HOUSING NOW

Gatineau¹

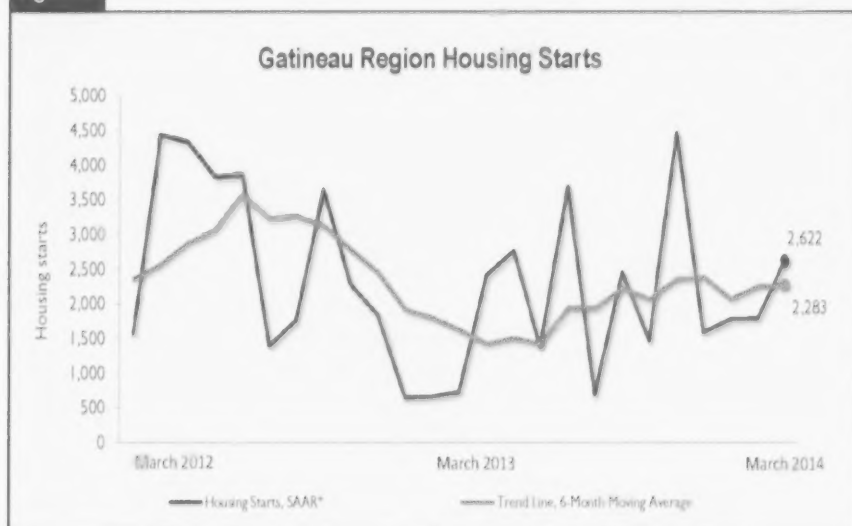

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2014

Highlights

- Gatineau area housing starts rise in the first quarter of 2014.
- Centris® sales fall in the first quarter of 2014 in the Gatineau area.
- Median resale house price dips.

Figure 1

*SAAR: Seasonally Adjusted Annual Rate

¹ Quebec part of Ottawa-Gatineau CMA.

All starts figures in this release, other than actual starts and the trend estimate, are seasonally adjusted annual rates (SAAR) – that is, monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace were maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing starts in the first quarter of 2014

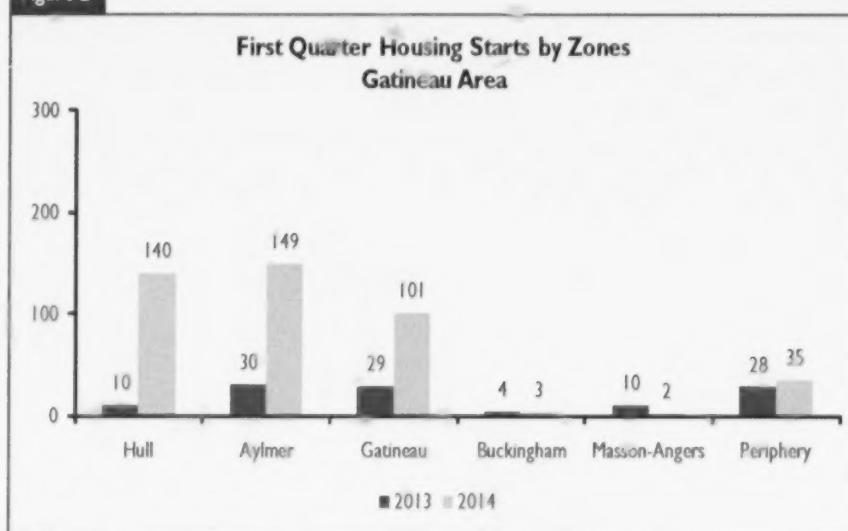

Housing starts in the Gatineau area were trending at 2,283 units in March, compared to 2,255 in February. The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts.

The actual data for the first quarter of 2014 revealed that starts nearly quadrupled over the number registered from January to March 2013 (430 units in 2014, versus 111 in 2013). It is important to note, however, that the level of starts recorded in the first quarter of last year was historically low.

In the first quarter of this year, starts rose in all housing categories (single-detached houses, semi-detached and row homes, and apartments). In the case of apartments, the gain was very significant, as such starts jumped from 36 units in the first quarter of 2013 up to 321 during the corresponding period in 2014.

The increase in the pace of residential construction was also noted in all intended markets (freehold, rental and condominium) and all geographic sectors in the area, except Buckingham and Masson-Angers. For condominiums, the start of construction on a project with over 100 units in Hull strongly contributed to the increase in activity in that market segment.

Figure 2

Sources: CMHC

Centris® sales continue to decrease in the area

In the first quarter of 2014, Centris® sales dropped by 5 per cent from the same quarter in 2013. The decline in sales of existing homes extended to all market segments. In fact, decreases were recorded for single-family homes (-2 per cent), condominiums (20 per cent) and plexes (15 per cent). The weak job market and minimal population growth in the area were no doubt factors that contributed to this decline.

It was a completely different story on the supply side, since active Centris® listings continued to rise in the first quarter (+12 per cent), reaching 2,927 units. Once again, increases in existing homes for sale were observed in all

market segments. Condominium and plex listings particularly stood out in the first quarter of the year, with hikes of about 25 per cent over the same period in 2013. It should be mentioned, however, that the increase in the supply of existing homes in the Gatineau area was not caused by a significant rise in new listings but rather by the fact that properties for sale have been staying longer on the market.

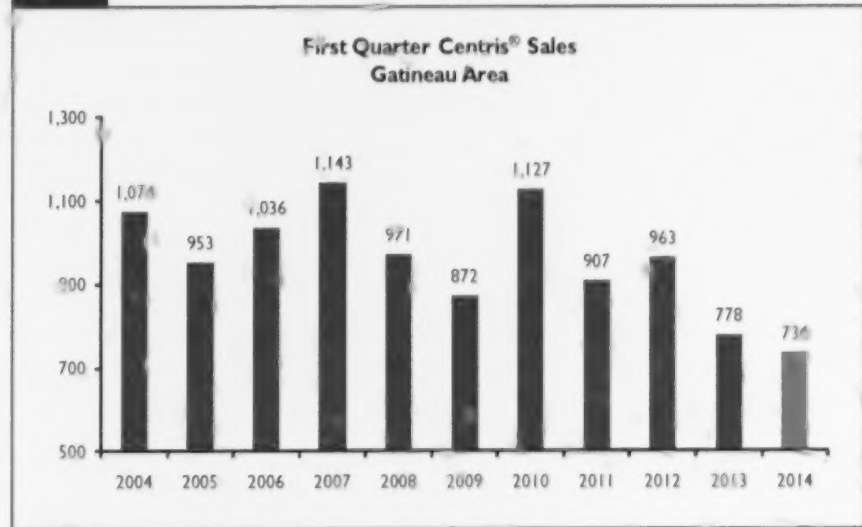

With a decrease in sales and a major increase in listings, resale market conditions in the Gatineau area eased in the first quarter of 2014. The market is balanced for single-family houses, while conditions are favourable to buyers in the case of condominiums and plexes.³

³ Twelve-month moving average.

Prices decline on the resale market

This easing of the resale market seems to have had an impact on home prices in the Gatineau area. In fact, the median Centris® price of single-family homes reached \$225,000 in the first quarter of 2014, for a decrease of 1 per cent from the same period in 2013. In the case of condominiums and plexes, the median prices registered drops of 1 per cent and 3 per cent, respectively. Another sign that the market was sluggish: the average times to sell homes increased for all housing types, except plexes.

Interregional migration

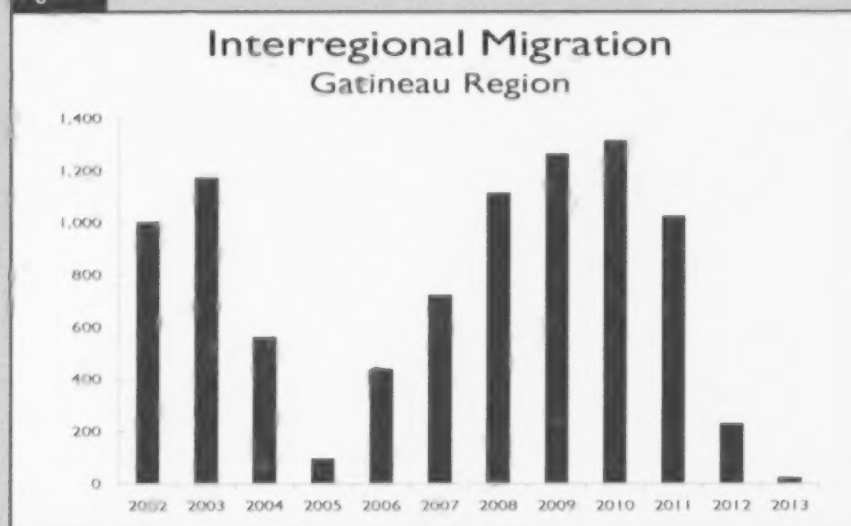

In 2013, net interregional migration in the Gatineau area reached +22 people, down from the level of +230 people recorded the year before. This was the lowest result in several years and was in line with a strong downward trend (see figure 4).

An analysis of the data revealed that the decrease in the net interregional migration was mainly attributable to the segment of people aged under 35. In fact, the annual level for this age group, which hovered around 900 people from 2008 to 2011, fell to 190 in the following two years. This significant decrease was due to the fact that the Outaouais region seems to have lost some of its appeal among young Quebecers, given the economic conditions and, more particularly, the employment situation in the area.

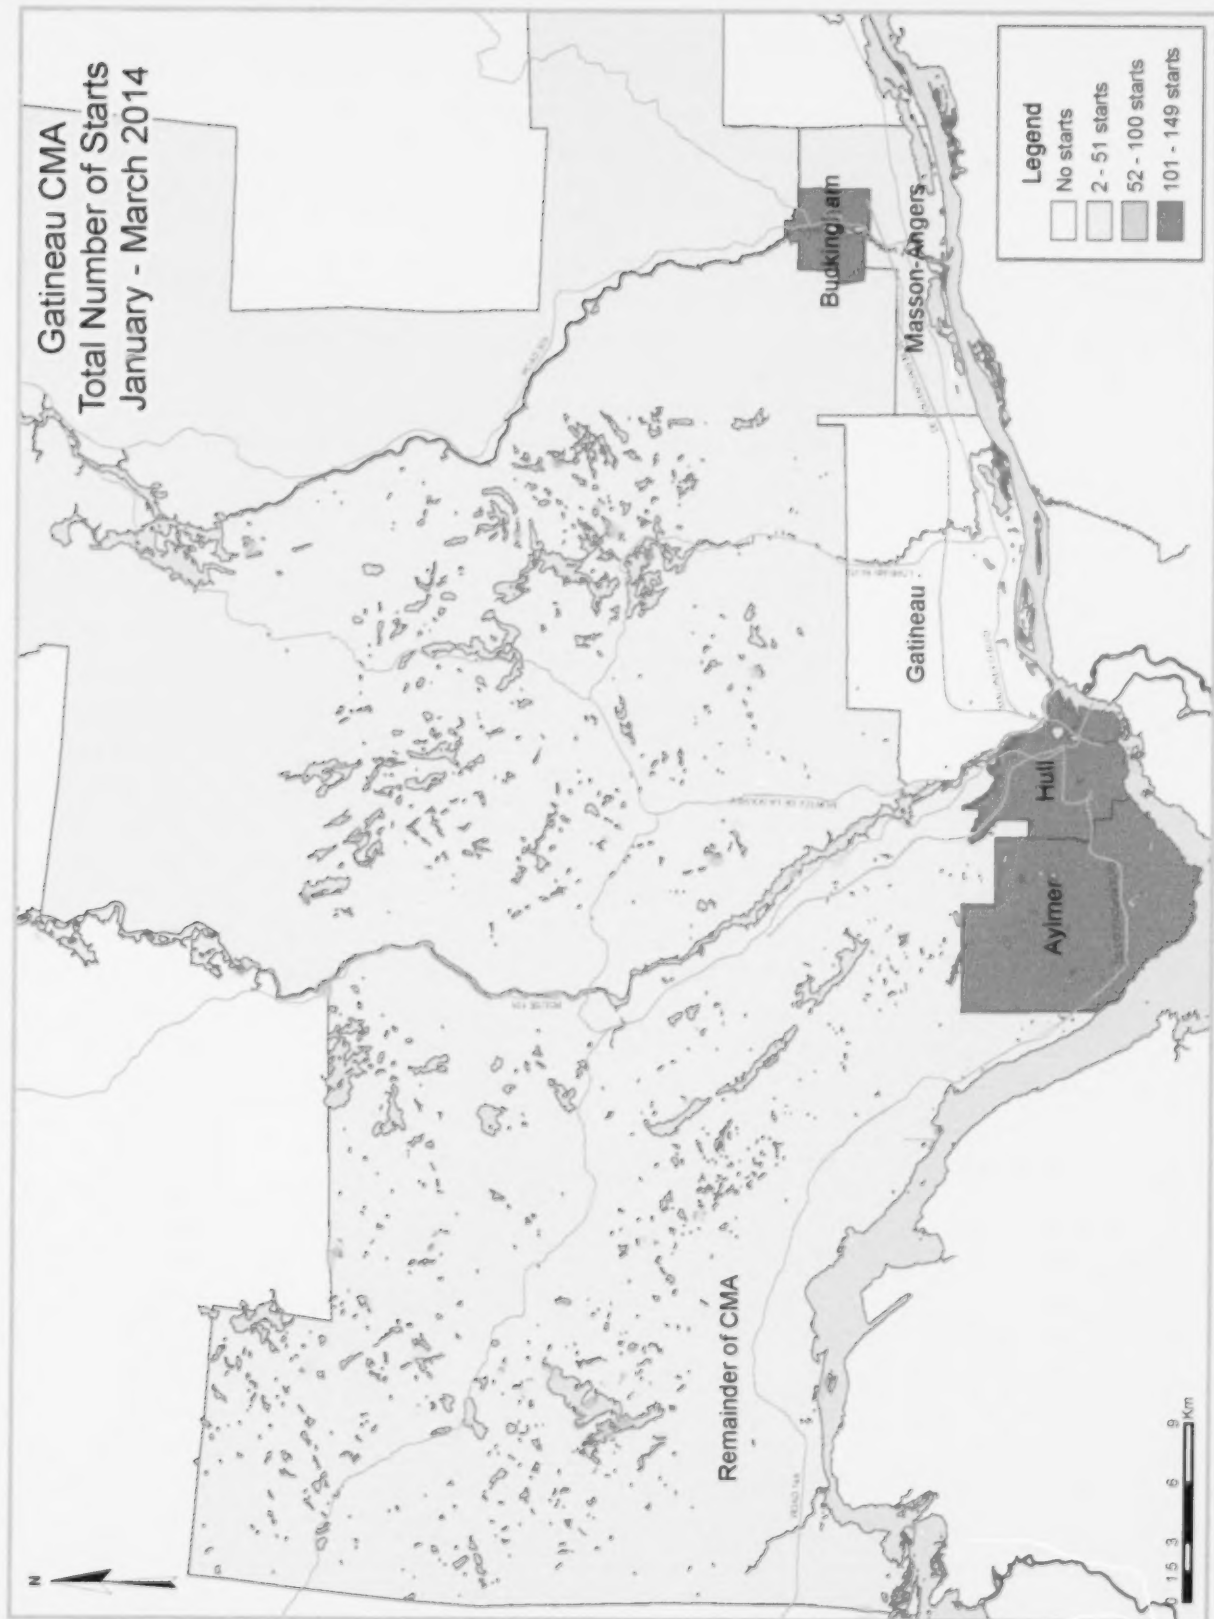

According to the analysis of the data by geographic zone in the area, the decrease in the net migration essentially occurred in the city of Gatineau and did not affect the municipalities that make up the regional county municipality of Les Collines-de-l'Outaouais.

The other CMAs in the province generally showed positive net interregional migration results in 2013, except Saguenay (-42 people) and Montréal (-8,963 people).

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "**dwelling unit**", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "**under construction**" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "**absorbed**" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **"Single-Detached"** dwelling (also referred to as **"Single"**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **"Semi-Detached (Double)"** dwelling (also referred to as **"Semi"**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **"Row (Townhouse)"** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other"** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **"intended market"** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **"Rural"** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
